

Table Design

USERS

Field	Type / Constraint
user_id	INT (PK)
full_name	VARCHAR(100)
email	VARCHAR(100) UNIQUE
mobile_number	VARCHAR(15)
password	VARCHAR(255)
otp_verified	BOOLEAN
created_at	TIMESTAMP

WEBSITES

Field	Type / Constraint
website_id	INT (PK)
user_id	INT (FK → USERS.user_id)
website_name	VARCHAR(100)
website_url	VARCHAR(255)
added_date	TIMESTAMP

SCANS

Field	Type / Constraint
scan_id	INT (PK)
website_id	INT (FK → WEBSITES.website_id)
scan_date	TIMESTAMP
security_score	INT
risk_level	VARCHAR(20)

VULNERABILITIES

Field	Type / Constraint
vulnerability_id	INT (PK)
scan_id	INT (FK → SCANS.scan_id)
vulnerability_name	VARCHAR(150)
description	TEXT

Field

AI_DATASET

Field	Type / Constraint
dataset_id	INT (PK)
vulnerability_name	VARCHAR(150)
severity	VARCHAR(20)
description	TEXT
solution	TEXT
owasp_category	VARCHAR(100)

REPORTS

Field	Type / Constraint
report_id	INT (PK)
scan_id	INT (FK → SCANS.scan_id)
report_file	VARCHAR(255)
generated_date	TIMESTAMP

- **Entity Relationships**
- **USERS 1—N WEBSITES** (*A user can register and manage multiple websites.*)
- **WEBSITES 1—N SCANS** (*A website can be scanned multiple times.*)
- **SCANS 1—N VULNERABILITIES** (*Each scan can detect multiple vulnerabilities.*)
- **SCANS 1—1 REPORTS** (*Each completed scan generates one PDF report.*)
- **VULNERABILITIES N—1 AI_DATASET** (*Each detected vulnerability is matched with the AI knowledge base to retrieve severity, OWASP category, and recommended solution.*)
